

CONFIDENTIAL PERFORMANCE MARKETING CASE STUDY

We Didn't Find the Winning Campaign on Day One.

How search intent turned a traditional honey brand into a more measurable e-commerce acquisition channel.

A Strong Product Didn't Mean an Easy Google Ads Campaign

An established Australian honey and natural-products brand with strong heritage and a broad catalogue — but search intent was far more complex than it appeared.

Honey Varietals

Organic · Premium · Jarrah · WA varietals

Natural Products

Bee pollen · Honeycomb · Beeswax

Gifting & Lifestyle

Candles · Gift sets · Premium packaging

Our First Problem Wasn't Lack of Demand.

"There was demand. The problem was knowing which demand was worth paying for."

These searches look similar — but represent very different purchase intent.

Generic

"Australian honey" — broad, low intent

Product

"Buy Jarrah honey" — commercial, ready

Research

"What is Jarrah honey?" — curious, not buying

Gift

"Honey gift Australia" — seasonal, occasion-led

We Started Too Broad.

The first phase taught us that increasing traffic wasn't enough. We needed to understand the relationship between **Search → Product → Intent → Purchase** — and we hadn't mapped it yet.

The Account Had an Intent Problem

Each intent required a different campaign strategy, message and landing-page experience. Treating them as one audience diluted performance across the board.

The diagnosis: we weren't advertising honey. We were advertising **reasons to buy** — origin, varietal, certification, and occasion.

- ❏ The shift wasn't in budget. It was in how we understood the search itself.

We Stopped Advertising "Honey."

"We started advertising reasons to buy."

Origin

Western Australia

Product

Jarrah · Marri · Wandoo · Wildflower

Proof

Organic certification

Discovery

Different honey varieties

Purchase

Relevant product page

From One Broad Category to Multiple Search Intent Buckets

One Product Category Became a Search Strategy

Instead of treating Jarrah as one SKU among many, we structured the campaign around the specific search intent surrounding it — from WA origin to premium positioning to the relevant product page.

- Generic searches like "Australian honey" require a discovery experience — not an immediate single-product push.

Every Search Term Became a Free Piece of Customer Research

Search-term analysis wasn't just a negative-keyword exercise. It became a way to understand customer demand – and to differentiate how we treated each click.

Brand Search

High familiarity – protect and reinforce

Product Search

High commercial intent – direct to product

Generic Search

Discovery – guide through variety

Research Search

Education – nurture, don't force purchase

More Purchases From the Same Traffic Volume

6%

Total conversion rate

The Biggest Change Wasn't a Bid.

Same traffic. Better intent matching. More purchases.

Illustrative numbers only. Replace with verified Google Ads / GA4 data before publishing.

Before

Traffic-first · Broad keywords · Click-focused

After

Intent-first · Product-specific · Purchase-focused

We Didn't Solve It by Buying More Traffic.

"We solved it by understanding what the traffic actually meant."

Search Intent

Classify every query by purchase readiness

Product Relevance

Match the right product to the right search

Brand Trust

Connect ad message to website experience

Continuous Testing

Every purchase improved the next decision

From **"people searching for honey"** to **"people searching for the right product."**
