

PERFORMANCE MARKETING CASE STUDY

Turning High-Intent Search Into a Scalable E-Commerce Acquisition Channel

Confidential Australian Outdoor Consumer Brand · Google Ads · E-Commerce
Growth

A Product Built Around a Clear Consumer Problem

An Australian consumer brand specialising in **DEET-free insect-repellent products** for outdoor living, travel, camping, and everyday protection from mosquitoes and sandflies.

Repellent Sprays

Full-coverage protection for active outdoor use

Repellent Lotions

Long-lasting formula for sensitive skin

Travel Packs

Compact formats for domestic and international travel

Adventure Packs

Bundled solutions for camping, fishing, and hiking

The Challenge Wasn't Traffic. It Was Profitable Demand.

Consumers search for insect protection with **different intents, different vocabularies, and different purchase readiness.** Without a structured account, high CPCs and mixed intent create wasted spend.

"mosquito repellent"

"DEET free mosquito repellent"

"sandfly repellent"

"insect repellent for camping"

"travel insect repellent"

We Built the Account Around Purchase Intent

Rather than sending all traffic to the homepage, the campaign was structured to **connect each search intent with the most relevant product** — reducing friction and improving conversion rates at every stage.

Each stage of the funnel was optimised independently, ensuring that budget flowed toward the highest-converting paths.

We Segmented Search by Why People Were Buying

Category Intent

Mosquito repellent, insect repellent — broad product awareness

Problem Intent

Sandfly repellent, mosquito protection — specific pain point

Lifestyle Intent

Camping, fishing, outdoor activities, travel — use-case driven

Product Intent

DEET-free spray, lotion, travel packs — ready to buy

Different intent requires different messaging. Ad copy, landing pages, and bid strategies were tailored to each segment.

Search Was Only One Part of the Acquisition Engine

Product Visibility Strengthened Through

- Product feed optimisation – titles, descriptions, categorisation
- Relevant search themes aligned to high-intent queries
- Product-level performance analysis to guide budget allocation

Not Every Product Deserved the Same Budget

Budget and optimisation decisions were increasingly informed by **product-level commercial performance** — not just click volume or impression share.

- This framework shifted spend toward proven revenue drivers and away from underperforming SKUs.

The Search Had to Match the Product

Every ad group was mapped to a specific product category – eliminating the disconnect between what users searched for and what they landed on.

Relevance at each step reduced drop-off and improved Quality Score, lowering CPCs over time.

We Optimised Towards Revenue — Not Clicks

Primary KPI

Purchase / Revenue — every optimisation decision tied to actual sales outcomes.

Secondary Signals

- Add to Cart rate
- Begin Checkout rate
- Product View depth
- New Customer Acquisition

📄 Conversion tracking was configured at the transaction level — not just form fills or page views.

Demand Changes With the Outdoor Calendar

Budget allocation, search themes, and product focus were adjusted according to **seasonal consumer demand** — not kept static year-round.

1

Spring

Rising mosquito activity, camping season opens, travel planning begins

2

Summer

Peak demand — camping, travel, regional mosquito and sandfly pressure

3

Autumn

Fishing and outdoor activities continue, travel packs remain relevant

4

Winter

Lower volume — focus shifts to evergreen problem-intent keywords
