

E-COMMERCE PERFORMANCE MARKETING

From Product-Level Google Ads to a More Efficient E-Commerce Growth Engine

Confidential Australian Health & Wellness Brand — Google Ads Performance Case Study

A Multi-Product Brand With Multiple Purchase Intents

An Australian health & wellness brand offering supplements and consumer wellness products across five distinct categories — each with its own audience, search behaviour, and purchase economics.

Wellness Supplements

General health & daily wellness

Liver-Support Products

Targeted liver wellness formulas

Pet Wellness

Probiotics & immune support for pets

Oral Freshness

Breath fresheners & oral care

Product Bundles

Curated multi-product sets

THE CHALLENGE

The Challenge Wasn't More Traffic. It Was Better Product Intent.

A multi-product e-commerce business has different audiences searching for very different products — with different prices, conversion rates, and commercial economics.

"liver detox supplement"

High commercial intent —
wellness supplement

"dog probiotic powder"

High commercial intent — pet
wellness

"peppermint breath freshener"

High commercial intent — oral care

Multiple product categories

Different search intent, different prices, different conversion rates

Need to control irrelevant traffic

Informational queries consuming budget without purchase intent

Understand product-level profitability

Not all products share the same acquisition economics

We Structured Google Ads Around Product Intent

One account. Multiple customer intents. Each campaign group mapped to a distinct product category and its corresponding commercial search behaviour.

Each stage was optimised to reduce friction between the search query and the relevant product — creating a more focused, commercially efficient purchase journey.

Core Wellness General health & daily supplements	Pet Wellness Probiotics & immune support
Oral Freshness Breath fresheners & oral care	Brand / Product Searches High-intent branded queries

Not Every Search Deserved the Same Message

Budget and messaging were prioritised toward searches showing stronger commercial intent — protecting efficiency and directing spend toward higher purchase probability.

- **High commercial intent:** "liver detox supplement australia", "dog probiotic powder"
- **Medium intent:** "liver health supplements", "pet digestive support"
- **Informational:** "what is milk thistle", "how do probiotics work"

Shopping Turned Product Data Into an Acquisition Asset

Product feed optimisation transformed the Shopping channel from a passive listing into a structured acquisition engine — with every attribute working toward better matching and stronger commercial performance.

01

Product Titles

Keyword-rich, category-specific naming

02

Categories & Attributes

Precise classification for query matching

03

Pricing & Bundles

Competitive positioning and bundle signals

04

Search Themes

Product-level performance data informing PMax

We Looked Beyond Clicks to Product Economics

Entry Product

Lower price point · Lower purchase barrier · Potential first-order acquisition

Bundle

Higher order value · Multiple units · Potentially stronger acquisition economics

The goal was not simply to generate the lowest CPA — but to understand the commercial value of different products and customer journeys over time.

Where repeat-purchase or subscription behaviour exists, acquisition should be evaluated using longer-term customer value rather than first-order CPA alone.

Every Search Term Became a Data Point

Search terms were continuously analysed to identify high-value commercial queries and reduce irrelevant informational traffic. Each term informed a specific action.

Search Term	Intent	Product	Purchase	Action
"liver detox supplement"	High	Liver Detox	Yes	Scale
"what is milk thistle"	Informational	Liver Detox	No	Add Negative
"dog probiotic powder"	High	Pet Probiotic	Yes	Scale
"best breath spray"	Medium	Oral Freshness	Partial	Optimise Bid

Reducing the distance between the search query and the relevant product page helped create a more focused purchase journey — from search to ad to product to checkout.

We Optimised for Revenue — Not Clicks

The full-funnel tracking model ensured every stage was visible — with optimisation anchored to revenue, not intermediate metrics.

Primary KPI

Purchase / Revenue

All optimisation decisions anchored to commercial outcomes

Secondary Signals

- Add to Cart
- Begin Checkout
- Product View
- Subscription Signup
- Email Signup
